

IMMUNIZATION APPOINTMENTS

APPOINTMENT LINES:

Call 262-898-4460 for an appointment.

Appointments are available on a limited basis.

LOCATION:

10005 Northwestern Ave
US Bank - 2nd Floor
Franksville, WI 53126

COST:*

1 vaccine - \$10

2 vaccines - \$15

3 or more vaccines - \$20

Badgercare/Medicaid: Fee exempt

*Excludes adult immunizations

ELIGIBILITY:

Per new State guidelines, local health departments may only vaccinate people who are underinsured (vaccinations not covered by health insurance), uninsured, or on Medicaid/Badgercare. If vaccinations are covered by health insurance, you must go to your healthcare provider.

DTaP and Tdap vaccinations are currently available to all children, regardless of insurance status, but the state may change this at any time.

IMMUNIZATION RECORDS:

CRCHD is a user of the Wisconsin Immunization Registry (WIR), a computerized repository of individual immunization records.

To access your immunization record (name and SSN required) go to:
<http://dhfsWIR.org>

Mount Pleasant, North Bay, Norway,
Raymond, Rochester, Sturtevant,
Union Grove, Yorkville,
Town and Village of Waterford,
Town and City of Burlington**

WHY VACCINES ARE IMPORTANT

The United States has record or near record low levels of vaccine-preventable childhood diseases, but that does not mean these have disappeared.

Many of the viruses and bacteria are still circulating in this country or are only a plane ride away. That's why it's important that children, especially infants and young children, receive recommended immunizations on time. It's true that newborn babies are immune to many diseases because they have antibodies they received from their mothers. However, the duration of this immunity may last only a month to about a year. Further, young children do not have maternal immunity against some vaccine preventable diseases, such as whooping cough.

If a child is not vaccinated and is exposed to a vaccine-preventable disease, the child's body may not be strong enough to fight the disease. Before vaccines, many children died from diseases that vaccines now prevent, such as whooping cough, measles, and polio. Those same diseases exist today, but babies are now protected by vaccines, so we do not see these diseases as often.

For more detailed information on vaccines and vaccine-preventable diseases go to:
